Critical
Security
Operations

The Network Security Environment

continues to be a challenging one for the security professional aiming towards a higher standard with better legislative compliance. Both Sarbanes-Oxley and Privacy initiatives have been more difficult to deploy than initially expected. Further, continuing proliferation of data past laptops to mobile devices and beyond implies a great deal of required controls where corporate information is concerned. These challenges, when put together, will oblige the CISO of any large organization to stretch their limited budgets even further.

SecureOps Continues To Believe

that solutions exist to address those numerous issues that are both easily deployed and cost effective. Infrastructure Protection will still consume large budget numbers as IPS and smarter firewalls are deployed, either on a standalone basis or as part of more complex defense-in-depth architecture. With Privacy legislation becoming more encompassing and public, companies will need to invest in greater data protection as the voluntary encryption of files is no longer an acceptable control on its own. Laptop, external media and database encryption are logical next steps in the chain of controls.

Stronger Vision, Quicker Deployments

of best-of-breed technologies complemented by appropriate support and monitoring remain the strategic roadmap for the security professional to address the multiple and complex issues they face. SecureOps will continue to strive to deliver these solutions to its customers and participate in the various communities aiming at simplifying this process.

Our Managed Services Division

provides near-shore outsourcing solutions for incident detection and response and the ability to mitigate modern network security risks in a cost effective way. SecureOps also provides its customers with the best security products available through an extensive resale program as well as custom development when required. The result is a complete security offering to protect modern organizations.

- Leading Global Managed Security Provider Based in Montreal, Canada
- Since our inception in 2000, passion and integrity have characterized our customer relationships, earning us client loyalty and defining our competitive advantage.
- Successfully executing projects for Fortune 1000 companies in multiple industries
- Specializes in Information Security, business continuity
- Leading provider of End-to-End Security Solutions

A Full Suite Of Standards-Based managed security solutions, to help companies protect their most valuable corporate asset—information.
