

MONITORING SERVICES

“ Providing Custom, Cost Effective Managed Security Solutions for 20 Years through Information Security Expertise on a Foundation of Customer Trust. ”

SecureOps monitoring suite has the flexibility to cover the full range of options from the most complex incident monitoring, response and management requirements to the simple monitoring of a device's availability. Our certified staff of security analysts can assist your company in reviewing company logs for security incidents on a 24/7 basis. Monitoring processes are customized for each customer in order to report only events that are of interest to your organization. Optionally, we can help the ROI on your security investments by leveraging security logs that are difficult to monitor on their own by correlating them with high value log sources.

SecureOps Managed Security Services has the capability to develop a full incident management program which includes availability, performance monitoring, security monitoring, incident qualification, escalation and resolution. Escalation, notification and reporting practices and procedures can be adjusted to fit the requirements of organization or on a per incident basis. This includes a full complement of automated and self-service metrics that can be tailored to what your organization's needs.

SecureOps believes in the ability to deliver turnkey solutions geared to helping our customers achieve their information security objectives.

SecureOps has partnered with major security vendors to deliver best-of-breed product and service solutions that fit our customers' operational requirements. Our Secure Operations Center has proven to be a valued and trusted coordination and resolution tool to our customers in a variety of crisis situations. **SecureOps** believes that our SOC team truly enhances our customer's information security capabilities.

“

A full suite of standard- based managed security Solutions, to help companies protect their most valuable corporate asset- information

”

SecureOps can help you choose and employ a complete suite of products under one management framework to consolidate or replace several fragmented products. Alternatively, we can recommend additional products that fit your security requirements and budget so that you can continue to leverage existing hardware and software. We offer protection services using a variety of top-tier vendors to deliver a best-of-breed offering appropriate with the technologies deployed.

Our service platform allows the dynamic provisioning of services in a manner that can be individually customized to meet your unique security and budgetary requirements. Our flexible monthly payment program will lower capital expenditures reduce operating expense and approve security posture with an open or fixed payment structure. Our flexible monthly payment program will lower capital expenditures reduce operating expense and approve security posture.

SecureOps helps businesses develop realistic and standard base information security policies addressing the whole range of information domains. Cutting edge technology require cutting edge security, and **SecureOps** has developed expertise designing custom security services for a wide range of emerging technologies. We take pride in helping you protect your technology, customers, and employees.
