Our Professional Services team understands the value of protecting your organization's information and information systems from unauthorized access, use, disclosure, modification, or destruction. **SecureOps** offers consulting services in information security to plan and protect your most critical business assets. Our team is comprised of certified security consultants that possess an expertise in a variety of fields specifically geared to improve your overall security posture.

SecureOps is unique in its approach to improving security defense, the practices used, and the areas of focus. We are concerned with the confidentiality, integrity and availability of your data regardless of the form the data; electronic, print, or other forms. **SecureOps** provides concepts and solutions that are unique to each situation and understands the importance of addressing protection issues early in the planning process. Further, our Professional Service team's ability to discover and investigate the misuse or theft of sensitive information provides your organization with legal evidence found in computers and digital storage medium that can be used as evidence in court.

SecureOps specializes in security assessments aimed at uncovering the potential threats to your information assets, and are therefore, a critical starting point to avoid breaches. From architecture planning to risk assessments, **SecureOps** provides the highest possible assurance and confidence that your networks and systems are protected.

SecureOps can help you choose and deploy a complete suite of products under one management framework to replace or consolidate multiple products you may currently have deployed. We offer protection services using a variety of top-tier vendors to deliver a best-of-breed offering suited to the technologies deployed.

Our service platform allows the dynamic provisioning of services in a manner that can be individually tailored to meet your unique security and budgetary requirements. Our flexible monthly payment program will lower capital expenditures, reduce operating expense and improve security posture with an open or fixed payment structure.

We are committed to determine the likely impact of various events, develop options to mitigate risks and study their feasibility, and perform a cost benefit analysis. Our objective is to reduce risks to a targeted, cost effective level by your organization.

SecureOps provides security solutions for networks by comparing between what exists within a corporation and what is required. These assessments compare the existence of security policies, procedures, and mechanisms, to what is required by various laws and industry regulations such as the ISF Standard of Good Practice, ISO117799, HIPAA, SOX, GDPR and PCI-DSS.

Cutting edge technologies require cutting edge security, and **SecureOps** has developed an expertise in designing custom security services for a wide range of emerging technologies, thus allowing its customers to secure their infrastructure way before they become mainstream. We take pride in helping you protect your technology, customers, and employees.
