PROVIDING CUSTOM, COST EFFECTIVE MANAGED SECURITY SOLUTIONS FOR 20 YEARS

140K Hours of Monitoring

Security Operations Monitoring in 50 Countries and 6 Continents

100K Endpoints Secure

A Managed Security Services Provider (MSSP) provides resources and support to your people, processes and technology 24x7x365 to protect your customers, employees, and assets from security threats.

SecureOps delivers our customers value by creating close relationships, assessing needs, and providing tailored, cost effective solutions. While many MSSP's attempt to package services and solutions to cut costs, **SecureOps** certified experts understand that the constant changes in technology, threats, and risks to a business demand a partner who understands the customer's business and environment to provide the most effective protection.

Founded in 1999, **SecureOps** is the Managed Security Service Provider that has evolved our services and grown our expertise to better protect our customers and their data. The benefit to our customers is that they have a partner that understands their environment, business risks, and threats. The real value is the ongoing support that ensures protection for their customers, employees and data.

Our mission has always been to achieve a center of excellence in information security, employing best of breed technologies paired with our full complement of services on a 24x7 global basis.

SecureOps delivers not only 24x7 monitoring, device management, and threat management but a broad spectrum of managed security services. Our overarching goal is to prepare and protect our clients against evolving threats by investing our certified experts in the business to provide the precise solution.

We take a multi-pronged approach to your businesses' security needs, focusing end-to-end on every aspect of your infrastructure, from servers to individual end users. Our methodology allows for a turnkey system, making sure that your protected information is always directly in your control.

We take every precaution to verify and protect the information that matters most to your business. We seamlessly integrate with your company's staff and practices, allowing for a simple and elegant solution without the potentially costly and time-consuming overhead from an in-house alternative.

We are **SecureOps**, and your data has never been safer.

Managed Firewall, SIEM, and IPS/IDS
3rd party management of leading threat management devices

Monitoring Services 24x7x365
log monitoring and management services.

Threat & Vulnerability Management
Scanning, assessment and management to eliminate threats

Professional Services Customized
services to improve security posture and augment in-house resources

Endpoint Security
Securing endpoint devices using both of software and hardware solutions
